

REMARKS

The Examiner's thorough review of the case and the allowance of the claims is appreciated.

Applicants have amended claim 8 to recite "retaining acquisition settings for the at least one initial projection image" to provide antecedent basis for "the retained acquisition settings for the at least one initial projection image," which language already appears in the third recited step of the method claim.

Since the language already appears in the claim, there is no substantive change to the claim. No new matter is presented.

Entry of this amendment in accordance with the provisions with the provisions of 37 CFR 1.312 is respectfully requested.

Respectfully submitted,

/Yan Glickberg/
